Fig. C

Disengagement (Ready-to-Fire)

To place the Taurus Revolver in a firing condition, you must insert the key in the security mechanism pin and turn the key counter-clockwise (**Fig.C**). In this position the top of the pin is in the same plane with the hammer surface. The Taurus Revolver is now ready to fire.

Warning:

All firearms must be kept out of the reach of children or persons not authorized to use them. Ammunition should be kept separated from the firearm. Never fully rely on any safety or security mechanism. It is not a substitute for safe and cautious gun handling. No safety or security mechanism, however positive or well designed, should be totally trusted. Like all mechanical devices, the safety or security system is subject to breakage or malfunction and can be adversely affected by wear, abuse, dirt, corrosion, incorrect assembly, improper adjustment, repair, or lack of maintenance.

Moreover, there is no such thing as a safety which is “childproof” or which can completely prevent accidental discharge from improper usage, carelessness or “horseplay”.
